

Take the 405 Freeway North and exit on **University Drive/Jeffrey Road** and make a left. (or you can stay on the freeway and get off at Culver and go right. It depends on how bad the freeway traffic is. You'll end up in the same place regardless.)

Go up to Culver and make a left.

Go to Campus and make right.

Make a left at East Peltason Drive.

Stay on E. Peltason Dr. and then turn right at **the light** (●) at Anteater Drive and park in the **Anteater Parking Structure** (APS on the map).

You'll enter on the 2nd floor. Make sure and pay for a parking pass at the entrance or you will be ticketed. Parking passes are \$2 per hour or \$10 for an entire day. You'll need to plan for at least 2 hours.

Drive straight ahead and park on the West side of the structure. There are stairs and elevators to lead you down to the sidewalk of E. Peltason Drive.

Exit the parking structure and go West on the sidewalk on E. Peltason Drive toward the **archway** (▲) of Engineering Gateway (just past the monument sign of "The Henry Samueli School of Engineering")

Walk under the **archway** (on the right) that reads "Henry Samueli School of Engineering", walk straight until you have passed the Rockwell Engineering Center (on the right). After you have passed the Rockwell Engineering Center you will be in the Engineering Hall Courtyard (●). Engineering Hall (Building 308 on the map) will be on your left hand side.

Take the elevator or stairs up to **level 2**. You will see a **blue/green industrial** looking door on the stair landing. Go through that door and across the walkway. The Cardiovascular Center is the door on the right. Ring the bell and I will come and get you.
